The smart way to manage all your Teamline meeting rooms

Teamline management platform – Maestro

Maestro gives administrators all they need to centrally manage and control their entire and globally dispersed Teamline meeting room systems.

It allows you to monitor room utilization, improve meeting room efficiency and provide remote support. Available via Microsoft Azure and on-premises, Maestro is the key to easy management of a video meeting room estate, reduced and controlled system downtime and low cost of ownership.

A dashboard provides a wealth of information including current status of all active rooms, instant access to call detail records, analytics and reporting, as well as advanced firmware management.

Maestro keeps IT in control of all Teamline rooms at all times, reduces the support burden and delivers a great quality of service for all deployments – large and small.

Features

- Central management platform providing complete Teamline meeting room estate management from a single location
- Fast system provisioning utilizing QuickConnect and reduced installation time
- At a glance status of all active Teamline rooms, plus alerts and notifications of system and installation issues
- Advanced firmware management and scheduling of software updates
- Quickly analyze and report on usage with powerful analytics and call detail records
- Enables simple installation and configuration of newly deployed systems, including the ability to clone existing device settings for easy replacement
- Manage device settings for remote units
- Available via Microsoft Azure or on-premise
